ARCHITECTURE EXPLANATION

Yiba Wise Platform – Two-System Architecture

Purpose

To clearly separate **learning delivery** from **regulatory, compliance, and QCTO requirements**, without rebuilding or breaking what already works.

System 1: Yiba Wise Website (Tutor LMS)

Status: Existing, stays as-is
 Technology: WordPress + Tutor LMS (3rd-party plugin)

What this system does well

- Course hosting
- Lessons, videos, quizzes, assignments
- Learner progress *inside a course*
- Teaching & learning interactions

What it is NOT designed for

- QCTO Programme Delivery Readiness (Form 5)
- Institutional compliance
- Evidence management
- Audit trails
- Regulator (QCTO) access
- Learner governance across institutions

👉 **Role:** *Education & Learning Delivery Platform*

System 2: New Custom Compliance & QCTO App

Status: To be built
 Technology: Custom (separate app / site)

What this system will handle

- Programme Delivery Readiness (Form 5 – Phase 2)
- Learner Management Information System (LMIS)
- Institution profiles & accreditation readiness
- Evidence & document uploads (CVs, contracts, MOUs, OHS, policies)
- Audit trails (who changed what, when, and why)
- QCTO dashboards & evaluation tools
- POPIA compliance & data governance
- Learner enrolment history across multiple institutions
- Certificates & official learner records

👉 **Role:** *Regulatory, Compliance & Oversight Platform*

How the two systems work together

- They are **separate systems**
- They share **logical identifiers**, not deep technical dependencies:

    - Learner National ID
    - Institution ID
    - Qualification / Curriculum Code

- No immediate API dependency (lower risk, faster build)
- Optional integration can be added later

User Experience Summary

- **Learners:**
  Learn on Tutor LMS → View official records & certificates on the Compliance App
- **Institutions:**
  Teach on Tutor LMS → Report, comply & submit evidence on the Compliance App
- **QCTO:**
  Uses ONLY the Compliance App (no LMS access needed)

Why this approach is correct

- Avoids rebuilding or fighting Tutor LMS limitations
- Aligns directly with QCTO evaluation processes
- Reduces legal, POPIA, and audit risks
- Future-proof (can integrate other LMSs later)
- Positions Yiba Wise as a **national-grade compliance platform**, not just an LMS

Bottom Line

Tutor LMS = Learning Engine
New App = Compliance, Governance & QCTO Oversight
